

General (all Android apps)

Do you do beta testing?

I generally do my own testing but I do on occasion send beta versions for people to test.

While I have never done "mass" beta testing, if you are a PRO user and are interested in participating in beta testing should I ever decide to do that, just send me an email and let me know you are willing to beta test. If I ever do decide to send out beta versions to a number of people, I might send it to you as well.

Below are a couple issues in DirecTV Remote that I wouldn't mind doing some more testing with. If these affect you then please send me an email if you'd like to help resolve the issue. The problem is that I cannot repeat these issues on my own devices, network and equipment which makes it difficult to troubleshoot and fix.

- WiFi not properly detected on some devices (should be improved in version 2.2.2).
- Scanning sometimes misses one or more receivers on some devices or networks (but manually adding the receivers works every time).
- Scanning used to work but no longer does (neither does manually adding a receiver). I've had a couple reports of this, one of which was resolved by making changes to their router. I was never able to determine why it suddenly started happening though because the basic principals of scanning in my app have not changed since the first version I released. I was never able to completely rule in (or out) a specific cause.
- Some devices vibrate and play a sound when the notifications are updated in the app. There is a [work-around](#), but I'd still like to test it further and try other things to fix it.
