

DirecTV Remote+ Volume Plugin

Why isn't Vizio supported in the Volume Plugin?

I've had quite a number of requests for Vizio and would love to add support for it to the volume plugin. After failing to find any information on how to control a Vizio TV over network, I contacted them directly and asked about it. Unfortunately their response was that their TVs do **not** support any kind of remote control over network.

I don't know why they made this kind of decision when most other major brands have this capability.

Note that Vizio's **can** be controlled with the plugin using **IR** if your phone or tablet has a built-in IR blaster.
