

DirectTV Remote+ Volume Plugin

How do I use HomeSeer with the volume plugin?

If you use HomeSeer (Smart Home software) and you have an IR blaster as a part of your HomeSeer setup then you can control any TV or AVR that is configured in HomeSeer!

Requirements:

- HomeSeer software
- TenHSServer (free "addon" [available here](#))
- A HomeSeer-compatible IR blaster
- You will need to create an "event" in HomeSeer for each IR command you wish to send (such as Volume Up, Volume Down, etc) and select the appropriate IR action for those events
- Once the events are created, just enter them into the Volume plugin app along with your HomeSeer server's IP address and port
